

State of the Moorage, 2020

Loren Beach, Moorage Chair

The Club owns a modern all-concrete-dock moorage facility with approx. 150 slips. It is easily one of the newest and best built marinas in the NW. We operate a club-owned dredge for two months in mid winter to maintain the depth at a uniform minus-six feet, measured at zero on the river gauge board. The dredge is operated solely by volunteer members. We have two gauges, on piling bases at the foot of each ramp.

Depth throughout the marina is kept nearly constant, with natural deepening towards the river channel under the last several slips on walk two and on walk one.

Our moorage is normally full with a waiting list. Prospective members should expect a wait of six months up to a year for a slip of their own, depending greatly on boat length and beam. Slips may occasionally be reassigned by the Club.

Any member wanting a PDF copy of the Lists (posted on the cork board in the hall way at the west end of the clubhouse) can email a request to the Moorage Chair.

Moorage Rates are posted in the club house.

Slips are assigned by seniority on the List, subject to the overriding needs of the Club, per Moorage Rules A. 1. a and b.

Temporary slips for those on the Waiting List are often available, as the Club's moorage rules permit the Club to sublet a temporarily unused slip and credit the slip rent to the assigned member.

By May we usually start seeing openings around the moorage, on Walks 1, 2, or 5, from which boats have gone north for two to four months on vacation.

Members planning on vacation cruises should let the Chair know when they are leaving and planning to return.

Anyone on the Waiting List wanting a temporary "double fill" slip should contact the Moorage Chair, or one of the Residents.

There are also limited temporary slips available during the winter, when a member's boat is out for repair or dry storage.
